Energy Park to close for playground install

GREENFIELD — The Greenfield Energy Park will be closed from Wednesday to Friday for the installation of a new play train structure.

Citizens are asked to please avoid the area, as heavy machinery will be in use. There will be limited parking in front of the Red Caboose in the Miles Street parking lot.

The town awarded the bid for the new playground to Site Specifics LLC of Rochester, according to a news release about the project. The play structure, designed by UPC Parks will feature a three-piece train with play engine, caboose and flat train car, and two train-themed benches.

“We are excited about the

new playground. In selecting a playground design for the park, it was imperative that it fit with the train theme while also complying with all safety standards,” Recreation Director Christy Moore said in the release. “We think this structure will complement the park nicely.

The park will reopen when the project is complete.
